

Dear Commissioners:

Please DO NOT AUTHORIZE Broadband via Power Line.

I already have severe radio noise on much of the HF spectrum at my home location as a result of my local power company's refusal to fix bad transformers, leaky insulators, etc. I am an amateur radio licensee (W8OI) and I have had little success in dealing with American Electric Power Company on this problem.

I know that BPL will be much worse than my present very loud power company-caused noise. Tests have proved that. The Japanese were right in not permitting BPL in Japan. I beg you not to authorize this terribly bad noise pollution in the United States.

Respectfully submitted.
